

2023 Irrigation Winter Training

December 13

Hendricks County 4-H Fairgrounds
1900 E Main St
Danville, IN 46122

The Indiana Irrigation Contractors Council (IICC) will offer two excellent irrigation management training workshops instructed by Mr. Keith Schweiger who has taught our Indiana Irrigation Technician Class for several years. Interested students may register for one or both workshops, and lunch is included with registration.

Electrical Troubleshooting

7:30 AM - 11:30 AM

Class Size Limited - 24 Students

This four-hour workshop will begin by looking at definitions and terms. We will then explore the relationship among voltage, amperage, and resistance. General troubleshooting procedures are discussed along with the world of multi-meters and their use while looking at system wiring, and electrical faults. Bring your past or current electrical problems for discussion.

NOTE: This is a hands-on class. Students are required to bring their own meters in order to test real-life scenarios.

Irrigation Controller Scheduling

12:30 PM - 4:30 PM

Class Size Limited - 40 Students

This workshop begins with understanding all the inputs to create proper irrigation schedules. This background can then show how “smart controllers” work and their benefits to both the contractor and the customer. The class is designed to give the student real site examples to help them develop valid schedules. The impact of water use in landscape maintenance is significant and many contractors and landscapers are being forced to change past practices. Experience has shown us that many irrigation systems are set once each year at the time the system is turned on in the spring. Developing weather patterns in the mid-west dictate that irrigation scheduling be monitored and perhaps changed as we go through the growing season.
